

String Concatenation and Interpolation

String Concatenation:

The + operator is used to combine strings.

```
int a = 20;  
string s = "Value of a is: " + a;
```

String Interpolation:

Another option of string concatenation, is string interpolation, which substitutes values of variables into placeholders in a string.

```
int a = 20;  
string s = $"Value of a is: {a}";
```
